

exception

```
classDiagram
    class exception {
    }
    class Character_Detected {
        + what()
    }
    Character_Detected --|> exception
```

The diagram illustrates a class hierarchy. At the top is a class box labeled 'exception'. It has two empty rectangular compartments below the name. Below the 'exception' box is a blue arrow pointing upwards, ending in a hollow triangle. This arrow originates from the bottom of a class box labeled 'Character_Detected'. The 'Character_Detected' box has a grey background and is divided into three horizontal sections. The top section contains the class name 'Character_Detected'. The middle section is empty. The bottom section contains a public method signature, represented by a plus sign followed by 'what()'.

Character_Detected

+ what()
